 26 VOLUME II OF THE VIDEOTAPED
 27 DEPOSITION OF INDRAJEET CHAUBEY, PhD, produced
 28 as a witness on behalf of the Plaintiff in the above
 29 styled and numbered cause, taken on the 2nd day of
 30 March, 2009, in the City of Tulsa, County of Tulsa,
 31 State of Oklahoma, before me, Lisa A. Steinmeyer, a
 32 Certified Shorthand Reporter, duly certified under
 33 and by virtue of the laws of the State of Oklahoma.

INDRAJEET CHAUBEY, PhD, Volume II, 3-2-09

163

1 Q A considerable amount of it is unshaded areas;
2 would you agree?

3 MR. BOND: Object to form.

4 MS. TUCKER: Object to form.

5 MS. LONGWELL: Object to form. 09:34AM

6 A Yes.

7 Q Based on the studies we've talked about and
8 the published literature, your experience and
9 education, do you have an opinion whether there is
10 sufficient evidence to establish that phosphorus is 09:35AM
11 transported, phosphorus and nitrogen is transported
12 from waste-applied fields in runoff to the waters of
13 the Illinois River watershed?

14 MS. TUCKER: Object to form.

15 MR. BOND: Object to form.

16 MS. TUCKER: Object to form.

17 MR. FREEMAN: Object to form.

18 MS. LONGWELL: Object to form. Calls for
19 an undisclosed expert opinion.

20 A Yes. 09:35AM

21 Q What is your opinion?

22 MR. BOND: Same objection.

23 MS. HILL: Objection.

24 MS. TUCKER: Same objection.

25 MS. LONGWELL: Object to form. 09:35AM

TULSA FREELANCE REPORTERS
918-587-2878

INDRAJEET CHAUBEY, PhD, Volume II, 3-2-09

164

1 MR. FREEMAN: Object to form.

2 A Phosphorus is transported from the areas which
3 are treated with poultry litter.

4 Q Are you, sir, the only one in the scientific
5 community to draw such a conclusion? 09:35AM

6 MS. LONGWELL: Object to form.

7 MS. TUCKER: Object to form.

8 MS. HILL: Object to form.

9 A No, I am not. Number of studies have been
10 published. 09:36AM

11 Q And are those very recent studies or are they
12 of some vintage, if you will?

13 A There were studies in '80s and '90s before I
14 started looking at it, early '90s before I started
15 looking at it. 09:36AM

16 Q All right. Can you tell the court the names
17 of some authors that you're aware of that have drawn
18 similar conclusions that you've just told us about
19 today?

20 A Dwayne Edwards or D. R. Edwards has done lots 09:36AM
21 of studies in this area. Dr. Tommy Daniel or T. C.
22 Daniel. Dr. Andrew Sharpley. Dr. Tom Simms, I
23 believe he's a professor somewhere in the Delmarva
24 Peninsula area. He has published. There has been a
25 number of studies. 09:37AM

TULSA FREELANCE REPORTERS
918-587-2878

INDRAJEET CHAUBEY, PhD, Volume II, 3-2-09

168

1 Q Do you recall generally how those differences
2 -- what they are, what you observed when you tested
3 both?

4 A It has been a while since I published those.

5 Q It's not a memory test. If you don't 09:41AM
6 remember, that's fine.

7 A Yeah.

8 Q Okay. Have you seen any studies or published
9 materials that concern poultry waste from different
10 bird types would act any different than poultry 09:41AM
11 litter or manure from broilers let's say?

12 MS. HILL: Object to form.

13 A Ask the question one more time.

14 Q Have you seen any studies or published
15 materials concerned with poultry waste from 09:41AM
16 different bird types indicating that it would act
17 different than poultry from broilers, poultry waste?

18 MS. HILL: Same objection.

19 A So generally speaking the amount of -- there
20 will always be some losses taking place from the 09:42AM
21 areas treating with -- treated with the poultry
22 waste. The level of magnitude may be different
23 depending upon the consistency and the physical
24 chemical characteristics of the sources.

25 Q I'm going to hand you Exhibit No. 6, Dr. 09:42AM

TULSA FREELANCE REPORTERS
918-587-2878

INDRAJEET CHAUBEY, PhD, Volume II, 3-2-09

175

1 cites Green and Haggard in 2001. Did you review
2 that study?

3 A I have seen Green and Haggard 2001 study.

4 Q And is that one of the studies you talked
5 about that had drawn similar conclusions as this 09:51AM
6 study?

7 A Uh-huh.

8 Q Would that be a yes?

9 A Yes.

10 Q Thank you.

11 A I'm sorry.

12 Q In your opinion, Dr. Chaubey, is there a
13 correlation between high STP levels and rates of
14 poultry waste manure or poultry litter application?

15 MS. TUCKER: Object to form. 09:52AM

16 MR. BOND: Object to form.

17 Q Let me restate it. Based upon your knowledge,
18 experience and expertise in this area, is high STP
19 levels in soil an indicator of poultry waste
20 application rates in excess of plant requirements? 09:52AM

21 MS. TUCKER: Same objection.

22 MR. BOND: Object to form.

23 MS. HILL: Object to the form.

24 MS. LONGWELL: Object to form. Calls for
25 an undisclosed expert opinion. 09:52AM

TULSA FREELANCE REPORTERS
918-587-2878

INDRAJEET CHAUBEY, PhD, Volume II, 3-2-09

176

1 A Yes.

2 Q What do you base your opinion on?

3 MS. LONGWELL: Same objection.

4 A There have been a number of published studies

5 that indicate that if you apply animal manure, 09:53AM

6 including poultry litter, in excess of what is

7 needed by plants, then phosphorus would accumulate

8 over time and that would be indicated as high STP.

9 Q Dr. Chaubey, can losses of nutrients occur

10 from fields that are low in STP? 09:54AM

11 MS. TUCKER: Object to form.

12 MS. LONGWELL: Object to form.

13 A Yes.

14 Q And how is that; why does that occur?

15 MS. LONGWELL: Same objection. 09:55AM

16 A Runoff when it interacts with the soil, it

17 will pick up nutrients, including phosphorus, from

18 the soil column if any amount of phosphorus is

19 present there. The level of magnitude may be

20 different depending upon the STP. That's why you 09:55AM

21 see some amount of phosphorus coming from entirely

22 forested areas, which may have very, very low STP

23 values.

24 Q Let's kind of change the subject a little bit.

25 Are you familiar with what's referred to as the 09:56AM

TULSA FREELANCE REPORTERS
918-587-2878

INDRAJEET CHAUBEY, PhD, Volume II, 3-2-09

192

1 MR. FREEMAN: Object to form.

2 MS. LONGWELL: Object to form.

3 A That is generally true.

4 Q Okay. Based on your knowledge, skill,

5 education, training and experience, including 10:19AM

6 knowledge of published literature, do you have an

7 opinion if the land application of poultry waste has

8 contributed a substantial amount, that is, more than

9 de minimis, of nutrients to the Illinois River and

10 its streams? 10:19AM

11 MS. HILL: Object to form.

12 MS. LONGWELL: Object to form. Calls for

13 an undisclosed expert opinion.

14 A Yes.

15 Q And what is that opinion? 10:19AM

16 MS. LONGWELL: Same objection.

17 A So we did the mass balance study and then

18 looked at a number of other published studies in

19 this watershed. Poultry litter is the biggest

20 source of nutrients when you look at all the 10:20AM

21 sources, and given that fact and given the fact that

22 it runs off the fields, it will be logical to

23 conclude that significant amount of phosphorus in

24 the river is coming from the areas that are treated

25 with poultry litter. 10:20AM

TULSA FREELANCE REPORTERS
918-587-2878

INDRAJEET CHAUBEY, PhD, Volume II, 3-2-09

231

1 MR. GARREN: Object to form.

2 A For a watershed assessment using GLEAMS or any
3 other field scale model, you need to interface that
4 or you need to have a routing model that goes with
5 it, and that's one way you can do a watershed scale 11:29AM
6 assessment, and it's done all the time.

7 Q Huh?

8 A It's done all the time by a number of modelers
9 using GLEAMS and other field scale models.

10 Q Okay, but the routing model is very important? 11:30AM

11 MR. GARREN: Object to form.

12 A Yes.

13 Q Okay. I can't remember how this was stated in
14 your first deposition, but do you hold the opinion
15 that if you apply poultry litter over the agronomic 11:30AM
16 rate, that it's waste disposal?

17 A I do.

18 Q You do?

19 A Yes.

20 Q Okay. What are you -- with respect to the 11:30AM
21 agronomic rate, what nutrient are you looking at;
22 are you looking at every nutrient in poultry litter
23 or are you just looking at phosphorus?

24 A I am looking at both nitrogen and phosphorus
25 because those are the two micronutrients of water 11:30AM

TULSA FREELANCE REPORTERS
918-587-2878

INDRAJEET CHAUBEY, PhD, Volume II, 3-2-09

232

1 quality concern that I have been studying.

2 Q Okay, but whatever else is in there that's
3 beneficial to the soil, you're not looking at that?

4 MR. GARREN: Object to form.

5 A It may be important, but in my studies I'm not 11:31AM
6 concerned.

7 Q Okay. Okay. So if you use litter above the
8 agronomic rate for phosphorus or nitrogen and --
9 hold on. Strike that. If you use -- if a farmer
10 uses litter above the agronomic rate, are you 11:32AM
11 talking about an instance where none of the
12 nutrients in the litter are needed for the soil or
13 all?

14 MR. GARREN: Object to form.

15 Q It's a bad question. I'm having a hard time 11:32AM
16 formulating it but --

17 A I'm not able to understand it either.

18 Q But if we're at -- if the soil test phosphorus
19 is at, you know, let's say 160 and they apply
20 poultry litter, are you saying in that instance that 11:32AM
21 it's waste disposal?

22 A Yes.

23 Q Okay. Tell me why that's waste disposal.

24 A Because assuming you are growing fescue or
25 Bermuda on that soil, which is the case here in the 11:32AM

TULSA FREELANCE REPORTERS
918-587-2878

INDRAJEET CHAUBEY, PhD, Volume II, 3-2-09

233

1 Illinois River watershed, there is sufficient amount
2 of phosphorus of a level already in the soil to
3 support the plant growth. It does not need any more
4 phosphorus. Therefore, applying any additional
5 phosphorus is a disposal. 11:33AM

6 Q Okay. So is it a disposal of phosphorus
7 because what if the grass needs nitrogen?

8 MR. GARREN: Object to form.

9 A It is true that grass needs nitrogen, and
10 nitrogen may be supplied by other forms of 11:33AM
11 fertilizer that does not have phosphorus into it.

12 Q Okay. What if the crop needs potassium?

13 A The same answer would hold true. Why -- why
14 would you apply a nutrient that is not needed?

15 Q What if it needs two out of three nutrients 11:34AM
16 that are found in poultry litter; is it waste
17 disposal?

18 MR. GARREN: Object to form.

19 A It is -- it is a waste disposal given the
20 environmental concerns and given the fact that 11:34AM
21 phosphorus is a limiting nutrient in freshwater
22 systems. So when present in excess, you get
23 eutrophication, so it is a waste disposal.

24 Q It seems to me that under your theory,
25 something can be waste disposal as well as 11:34AM

TULSA FREELANCE REPORTERS
918-587-2878

INDRAJEET CHAUBEY, PhD, Volume II, 3-2-09

234

1 agronomically beneficial. Do you agree with that?

2 MR. GARREN: Object to form.

3 A I don't understand your logic here.

4 Q Okay. From an environmental perspective, you

5 believe that applying phosphorus when it's not 11:35AM

6 needed by the grass is waste disposal; correct?

7 A Yes.

8 Q Okay. Let's say that grass needs nitrogen and

9 potassium but doesn't need phosphorus. The

10 application of that poultry litter would be 11:35AM

11 agronomically beneficial from a nitrogen and

12 potassium standpoint; correct?

13 A Application of nitrogen and potassium will be

14 beneficial to the grass. How you are meeting that

15 need defines whether you are disposing of waste or 11:35AM

16 not. If you are meeting that through inorganic

17 fertilizers, which does not have phosphorus present,

18 therefore, you are not putting any more phosphorus

19 on the land than what is needed, is different from

20 applying it through animal manure or triple 16, 11:36AM

21 right, it's -- I believe that's one of the

22 combinations of inorganic fertilizer, 16 percent

23 nitrogen, 16 percent phosphorus, 16 percent

24 potassium is present, but it also is fertilizer

25 disposal at the best because are putting something 11:36AM

TULSA FREELANCE REPORTERS
918-587-2878

INDRAJEET CHAUBEY, PhD, Volume II, 3-2-09

235

1 that is not needed for the plant growth.

2 Q Okay. In your work in the Eucha-Spavinaw
3 watershed and your familiarity with the ESPI, does
4 ESPI allow litter application on fields that are
5 above the agronomic rate for any single nutrient,
6 such as phosphorus?

11:36AM

7 A It looks at different risk alternatives, and
8 it allows litter application under low or medium
9 risk. It has been a while since I reviewed that
10 table, but I believe it does allow litter
11 application above strictly agronomic rates.

11:37AM

12 MR. BOND: Let's go off the Record.

13 VIDEOGRAPHER: We are off the Record at
14 11:37 a.m.

15 (Following a lunch recess at 11:37
16 a.m., proceedings continued on the Record at 12:52
17 p.m.)

11:37AM

18 VIDEOGRAPHER: We are now on the Record.
19 The time is 12:52 p.m.

20 CROSS EXAMINATION

21 BY MS. TUCKER:

22 Q Dr. Chaubey, I'm K. C. Tucker and I represent
23 the George's defendants in this matter. I apologize
24 in advance. I'm going to jump around quite a bit.

25 If at any point I'm unclear, let me know and I'll do

12:50PM

TULSA FREELANCE REPORTERS
